

AET Solutions for strong authentication

Software? Hardware? We care!

Since an increasing number of organizations began recognizing the importance of comprehensive and multilevel security for their IT infrastructures, a variety of security systems have come into use, often combined in several layers. Ultimately, it's a matter of protecting your most important assets against unauthorized access by third parties. AET Solutions provide perfect identity verification using multilevel authentication processes. Would you like multilevel identity verification via a USB token, a smart card or biomet-

ric processes? Or would you opt for a combination of today's technologies? No matter which process you choose, AET makes it possible.

Workstation and network access

Access to the valuable assets on your network should be restricted to authorized users only. Intelligent, in part multilevel authentication processes ensure that only authorized access occurs, whether using wired or wireless networks, desktop PCs or thin clients.

Ultimately, an organization should still be protected in the event that security-sensitive hardware like a laptop or a PDA goes missing or is stolen. AET Solutions can do that for you.

Remote access

It is increasingly necessary to give staff external access to the company's IT resources through remote connections, laptops or PDAs. But the option of external access to a company's own network poses one of the greatest

BENEFITS

Maximized user comfort

The era of computer users having to memorize endless passwords has finally come to an end. The convenient 'check-in' using a smart card or USB token has successfully replaced obsolete, memory-based password authentication. Now most software applications on the market are certificate-based and support login via smart cards or USB tokens. This ensures efficient cost savings due to considerably reduced administration costs.

Seamless set-up

Combining the new with the old has never been so easy. AET Solutions enable simple integration into existing IT infrastructures, for example certificate authorities, directories, browsers, VPN, remote access and more.

Compliance

AET Security Solutions meet the applicable regulations and directives of Common Criteria, CWA 14169 and CWA 14167-1.

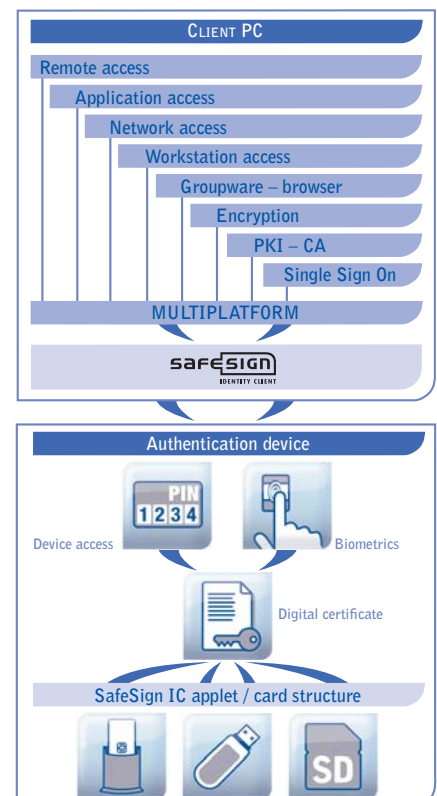

Future-proof

Since AET Solutions support a very wide variety of authentication devices such as smart cards, USB tokens and mobile phones, they are future-proof and a secure investment.

Broad user base

AET Solutions are proven to be reliable by over 6 million users worldwide, from consumer to enterprise markets, in all industries and governments like banking, insurances, healthcare, where information matters.

OVERVIEW: STRONG AUTHENTICATION WITH SAFESIGN IC

threats. AET ensures that the basis of this risk is removed. AET Solutions allow for the individual selection of various authentication processes, proven daily by millions of users.

Application access

A password is good, but not nearly enough protection for your valuable assets. AET supports all options going beyond purely password-based verifi-

cation, providing additional security for Single Sign On or content that is in particular need of protection.

Truly excellent solutions have the ability to grow along with expanding requirements

What good is the best system if it responds to changes too little or too late? AET Solutions are designed and created to adapt to internal company

changes and grow correspondingly. As a result, even highly divergent methods or different user groups within the company's own infrastructure are assured of harmonization at all times, complementing each other and benefiting from the same levels of allround digital security.

SOLUTIONS

SafeSign Identity Client

SafeSign Identity Client (IC) middleware for cryptographic smart cards and USB tokens gives you complete freedom and flexibility in terms of strong authentication, integration and compatibility. SafeSign IC offers the most comprehensive support available on the market for card operating systems, smart cards, USB tokens, languages and functions. SafeSign IC currently supports more than 70 smart cards and USB tokens. This means you have sustainable and permanent freedom of choice in your purchasing policies when it comes to manufacturer independence.

See our SafeSign Identity Client datasheet for more details on the product.

BlueX Digital ID Management

BlueX Digital ID Management – your future-oriented card management. BlueX Digital ID Management enables the workflows of your enterprise to be mapped in the system. No matter how an enterprise plans its individual ID security workflow – whether centralized or distributed, whether as a three-level variant with, for instance, registration officer, validation officer and production officer, or otherwise. BlueX Digital ID Management facilitates seamless and uncomplicated entry, configuration and production for smart cards and USB tokens with digital certificates.

See our BlueX Digital ID Management datasheet for more details on the product.

AET Technology Partners

AET Solutions work with most industry leaders across the world, including:

Solution PARTNER

The Security Division of EMC

Alliance Partner

Securing Digital Identities & Information

PARTNER

ASSOCIATE PARTNER

See our Solution Briefs for more details on our integration with Technology Partners.
